

Which subjects are generally considered the toughest?

It varies by batch, but Maths-II, Mechanics and Basic Electrical are usually considered the toughest. Don't panic—consistent study always beats last-minute cramming.

How should freshers prepare for exams?

Forget the "I'll start one week before" mindset. Attend lectures, make notes, solve previous-year papers and revise regularly. Your future self will thank you.

Which professors are known for teaching particularly well?

Every department has its favourites, but it depends on your learning style. Ask your seniors once classes begin—they'll quickly tell you which professors explain concepts best.

ACADEMIC GUIDE

How much self-study is realistically needed?

Around 1–2 focused hours a day is enough if you're consistent. Studying 10 hours the night before exams rarely works.

Ideally and practically, what GPA should students aim for?

Aim for 8+ if possible, but staying above 7 keeps many placement opportunities open. A good GPA gets you noticed—your skills get you hired.

Are there high-spec PCs available in labs?

Yes! Most labs have systems capable of running coding IDEs, simulations and required software. When labs are free, students can usually use them for academic work.

WHICH SKILLS ARE MOST VALUED BY RECRUITERS?

Problem-solving, communication, teamwork and practical projects. A resume gets noticed, but your skills are what get you hired.

WHAT COMMON MISTAKES HURT PLACEMENT CHANCES?

- Starting DSA too late
- No meaningful projects
- Weak communication skills
- Low CGPA
- Copy-pasting projects without understanding

WHEN SHOULD STUDENTS START PREPARING FOR PLACEMENTS?

Enjoy first year. Build good habits and explore your interests. By the end of second year, start taking placement prep seriously with DSA, projects, internships and communication skills.
