

# Student Clubs

# Discover your clubs

**01**

## Club Culture

Because the BLR campus is relatively new, the club culture is still maturing, which is actually a blessing, you have the chance to be a founding member or rise to leadership much faster than at the main campus.

**02**

## Joining & Interviews

Club inductions usually happen a few weeks into the odd semesters. Yes, most clubs have interviews (a basic technical round for tech clubs, and a general HR/vibe-check found for non-tech). They are highly doable, seniors are just looking for enthusiasm and willingness to learn.

**03**

## Technical Clubs

Extremely beneficial for coding culture and projects. Look out for Google Developer Student Club, CodeX, Neura AI, RADAR (Robotics Automation Data Arduino), Electrovista (Electronics), Ved Club (recently inaugurated), and various coding/AI chapters. (IEEE,ACM)

**04**

## Non-Tech Clubs

Very active! There are music, dance, debate, photography and sports clubs (the basketball culture is strong here).

# Time Commitment

Expect to spend 3-5 hours a week for standard clubs. If you join a major student project (like MAVRO or CEMS team).

It always depends on you as a person, you may join as a hobby or passion or an extracurricular activity. (We would suggest major student projects and as a hobby join non tech clubs)

Should I join?
